

DATA COLLECTION SHEET

CLEANING AND SELF CLEANING AUTOMATIC FILTERS

Automatic cleaning and self-cleaning filters model BRAVOMAX A, BRAVOMATIC and PULIMATIC are 'safety-filters' specifically designed and realized for protection of waterworks plants from coarse materials (rust oxide, limescale flakes, and small stones) that can be present in drinking water supplied from the water main.

Automatic cleaning and self-cleaning filters model BRAVOMAX A, BRAVOMATIC and PULIMATIC therefore are not suitable for the filtration of water containing high quantities of suspended materials (algae, lime) and sediments materials (sand), as well as the well water. They are available specific filters (model FLM) which are suitable for the treatment of this kind of water.

Warning! Acqua Brevetti 95 srl does not suggest the installation of the filters model BravoMAX A, BravoMATIC, PuliMATIC in waters different from the one supplied from the water main. It is informed that the conventional guarantee of the filter stops in the case of non-compliant installation.

In case of doubt, it is recommended to consult Acqua Brevetti's Technical Department.
